

VINEYARD

0.5-0.8 l / ha

Spraying plants during the growing season 4-7 times with an interval of at least 10-14 days. The consumption of working fluid for each treatment is not less than 300 l / ha.

1. top dressing with the beginning of the growth of shoots and flowers.
2. top dressing at the time of loosening of flowers, before the beginning of flowering
3. feeding-beginning of berry growth
4. feeding-growth of berries
5. feeding-beginning of ripening of berries
6. it is also mixed with all pesticides and fungicides and sprayed after each disease attack 2.5-4.0 l/1000 l of water

Root dressing includes 3-5 times of use during the growing season of the plants. The consumption rate of the relic is 4.0-9.5 l/ha.

The main stages of application are recorded in the regulations on the application of relicts by spraying.

With an increase in the consumption of the working solution during spraying, for every additional 100 l/ha, 0.1 l/ha of relic can be added up to 0.5 l/ha.

Using relict R by root feeding method sometimes accelerates fruit growth, which can lead to their cracking. When the first signs appear, it is necessary to change the speed of irrigation, reducing the amount of water by 10-20% from usual. You cannot burn or harm the vineyard with this preparation, since the preparation does not contain any chemical

ingredients, but it is better to apply it according to the manufacturer's regulations.
